

# ThinPrint® PERSONAL PRINTING

## Secure Printing with Maximum Cost Savings

Ensure your company is compliant with the new **EU General Data Protection Regulation** before May 25, 2018 with Personal Printing by ThinPrint. The pull-printing solution delivers confidential printing for organizations of any size and prevents personal data from falling into the wrong hands. Print jobs are only issued once the user has authenticated directly at the printer. This also means that only documents which are actually required are printed out – resulting in significantly reduced printing costs.

### Confidential Printing

Printing sensitive data entails high security risks – especially with shared office printers:

- In the HR department, applicants' documents are easily accessible at the printer.
- An important contract needs to be printed for a customer.
- Salary details inadvertently end up being sent to the wrong printer.

### Reduce Printing Costs

Many companies have unnecessarily high printing costs:

- Printouts are not picked up at the printer.
- Costly single-workstation printers are used.
- Printer management is time-consuming and there are too many helpdesk calls.

## ThinPrint Personal Printing Advantages:

- Printouts left at the printer no longer happens, this reduces toner and paper costs.
- Print jobs can be viewed and deleted by the user before printing.
- Expensive single-workstation printers can be eliminated.
- Authentication can be completed by scanning a QR code with a smartphone or tablet, by RFID card or PIN entry directly at the printer.
- The Personal Printing Release Station enables printer manufacturer independent authentication and is suitable for all employee ID cards thanks to comprehensive card reader support.
- Self Registration allows employees to scan their existing smartcards or tokens at a Personal Printing Release Station and generate a personalized printout containing all they need to know in order to self-enroll.
- Confidential print data are securely stored on the central print server.

### Start with Specific Users – Scale Up Flexibly

Personal Printing is very easy to implement. It can be used inexpensively with any of your existing printers, without additional hardware. Thanks to user-based licensing, you can start with selected employees with minimum investment, and scale up user numbers easily at any time.

**“Implementing pull printing typically helps reduce office page volumes by at least 10%; percentages vary by organization, and some organizations report dramatically more.”** – Gartner Research Note (Cost-Cutting Initiatives for Office Printing).
